Connection Scheme:

The line A is fully used and the link cable does not have any function, it is connected to the "CABLE TIDY" socket. The line B can be loaded with 6 LEDs max. per output and the link cable has to be connected to the output no.7.

Example 2 - wrong wiring, connected LED modules will not light

10 outputs of the line A are used but these outputs have to be connected side by side ,no output can be omitted (output no. 10). In the line B, there is not the link cable connected correctly (the output no.7 has to be connected insted of the output no. 10).

Connection Scheme:

Example 1- all LED outputs are used:

The link cable is not connected by reason that all LED outputs are used.

Example 2- 2 LED outputs are used:

The link cable is connected to the output no.3, maximum load of both outputs 1 and 2 is 18 LEDs (per output).

Wrong wiring - LED modules will not light:

Do not omit outputs, the output no.2 has to be connected.
